Easy-to-use Software for
Managed Print Providers

PrintFleet® is a complete remote monitoring system, designed to capture, store, and analyze critical printing data from your client's locations.

Enhanced system performance allows you to complete rapid device discovery and polling, with the ability to manage multiple devices

AWARD-WINNING
FUNCTIONALITY

CLOUD-BASED
SOLUTION

AFFORDABLE
PER-DEVICE BILLING

NO LONG-TERM
COMMITMENT

FULL RANGE
TRAINING

PrintFleet reduces the complexity of managing imaging devices from multiple manufacturers that have to be monitored, maintained, serviced, and supplied with consumables. PrintFleet's relationship with manufacturers provides unparalleled device information and continuous growth.

Flexibility to manage an entire print environment regardless of manufacturer, with a single tool for control and accountability.

PrintFleet's intuitive set of features include:

Secure Hosting

- Hosted in a secure and managed environment based on your location

- Easily scalable (no future hardware or bandwidth concerns)

Flexible Pricing

- No initial capital investment required

- Flexible low monthly per-device billing

- No long-term commitment

Comprehensive Reporting

- Make better decisions by easily creating customized data reports

- Schedule reports to inform your customers when and where supplies are required

- Automatically send customized reports to email recipients on a predetermined basis, or download in PDF format with a custom branded cover directly from the web interface

Alerts

Use PrintFleet to be proactive; increase device up-time, and identify potential issues before they become a problem

- Create status alerts based on event and occurrence thresholds, triggers, standard and vendor error codes, or LCD screen text

- Generate a single alert to notify you at event start and event end, allowing for better management of the customer environment

- Be notified when selected alert conditions happen multiple times over a specified time period

- Use occurrence thresholds to help avoid sending your technician for trivial issues

Device Locations and MobileMapping

Import an image of an office floor plan and place the devices in their actual locations. Use our built-in tool or MobileMapping's advanced features as a consulting tool to reallocate, consolidate, replace or retire devices, or to easily locate a particular device. Receive a quick notification of device status with flashing indicators.

Device Data Views

Technical View—View basic device information including device name, supplies status, device status, yesterday's meter count, serial number, IP address, location, and last active date
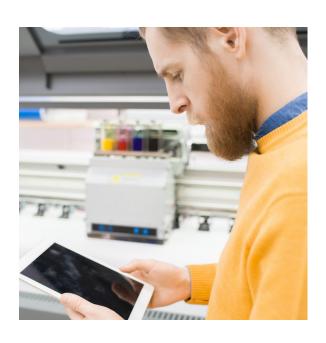

Supplies Order View—Displays supply-related information, including toner levels or status, and order supplies

Alerts View—See the customer name, number of devices with recent alerts, and a link to view alert details for each device

Maps View—Upload images of your office floor plans, then use them to place images of printing devices, computing devices, people, and other miscellaneous items. PrintFleet automatically updates the status of the devices, allowing you to quickly identify and locate devices requiring attention.

Value of the Cloud

- No loss of productivity due to server downtime

- Easy access from any computer or tablet via the internet

- Always up-to-date with automatic software updates

- Ability to easily manage multiple locations, verticals, and services

- All data and backups are secure and encrypted

- No server, hardware, or software requirements

- No time-consuming server maintenance
