

The Industry Leading **Managed Print Software**

Printanista brings together the **best** of FMAudit, Print Audit, and PrintFleet

The latest device management solution from ECI, Printanista Hub, provides you the flexibility to manage an entire print environment regardless of manufacturer, with a single integrated tool for better control and accountability.

**As always, we want to ensure
you can make the most of your
managed print offerings by:**

ERP connection

Synchronizing information
with your ERP system

Simplified ordering

Automating supplies
replenishment

Full automation

Simplifying error-prone
manual processes

Unlimited alerts

Allowing customizable service
and supply notifications

Streamline your managed print offerings

Printanista Hub is a powerful, easy to use managed print solution offering data collection, supply triggered alerts, automated supply fulfilment, comprehensive reporting, and a connection directly to your ERP.

Take it one step further and let us host it in a secure, scalable, managed environment enabling you to focus on your customers and not worry about software infrastructure.

FUNCTIONALITY

What's new?

Data Collection

The enhanced data collection agent (DCA) uses model definition files, custom scan intervals, differential transmission, and remote management features on a cross-platform deployment model (Windows®, macOS®, Linux®, and Raspberry Pi®) to ensure you can monitor more devices in more customer environments.

Local Device Support

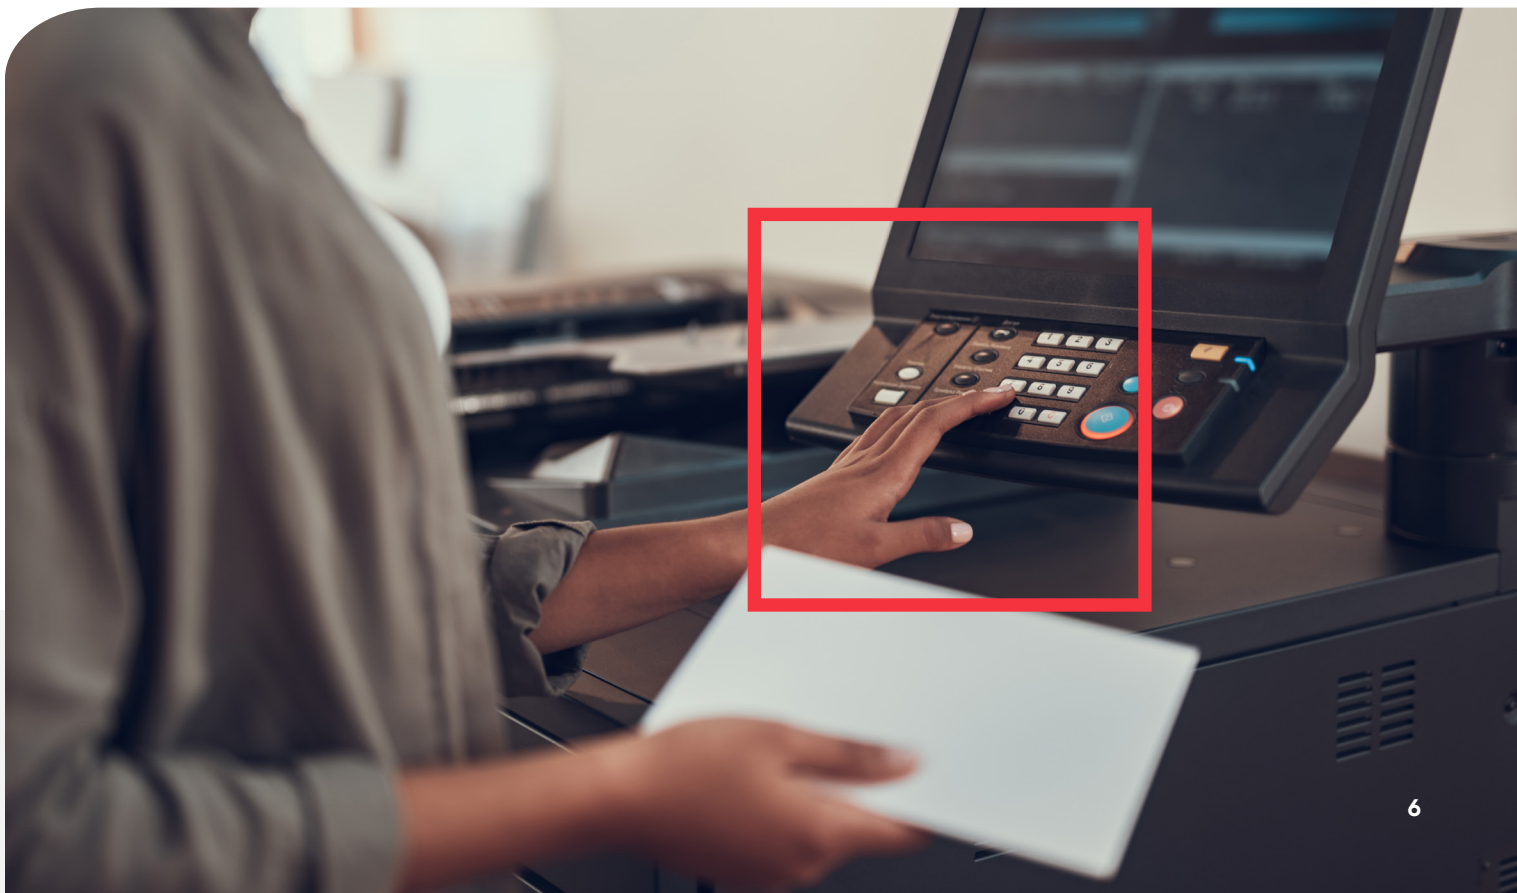

Taking advantage of functionality from the user management solution, Printanista Workflow, you can deploy an agent to each user's computer to capture USB and non-networked device print information, helping you support your customers' complete ecosystem.

Label Printers

In addition to our expertise in collecting print data from over 25,000 models from traditional print device manufacturers, we've added the ability to alert and report on label, receipt, and wristband printers from Zebra®. This delivers more accurate, reliable insights to power your managed print programs.

Remote Device Link

Connecting remotely to the web interfaces of printing machines means you can troubleshoot or adjust configurations of a device without having to send a technician onsite, saving you time and money.
