

Contactless Printing

Make print contactless.
Reduce risk.

As the world slowly returns to a new normal, businesses are focused on making their workplaces COVID-secure.

New guidelines recommend limiting or restricting use of high-touch items and equipment such as printers and MFPs.

EveryonePrint Hybrid Cloud Platform (HCP) enables end-users to seamlessly and safely print without touching the printer or multifunctional device's control panel.

- ◆ Make printing simple
- ◆ Contactless printer access
- ◆ Easy to use mobile app

Make print contactless. Reduce risk.

EveryonePrint Hybrid Cloud Platform (HCP) enables end-users to seamlessly and safely print without touching the printer or multifunctional device's control panel.

- ◆ Contactless printer access
- ◆ Easy to use mobile app

Printing in a COVID-secure workplace

HCP is a unique all-in-one print infrastructure solution, enabling organizations of all sizes to benefit from the agility and innovation of cloud technology.

Plus, HCP makes **contactless printing** extremely easy

Use HCP to modernize the print infrastructure in a way that suits your business, confident that it has the flexibility to accommodate your needs now and in the future.

Enable contactless printing in minutes

The EveryonePrint Mobile app enables users to print from workstations, laptops or mobile devices with ease. IT can push the app out to all users automatically, or individuals can download the app (available for iOS and Android devices) and be up and running in the time it takes to fill in a server address, username and password.

Push printing solution

HCP also caters for office-based workers who prefer to submit print jobs directly from their PCs. It's simple to select a push print queue on the computer, press print and collect from the device. Print queues can be set-up by location and are created automatically for each printer the user is allowed to print to.

Print direct from the app

Print securely to any device directly from the app. Intuitive and easy to use; users can view all available printers, add printers to favourites, see a list of all print jobs, select how many copies of the print job to release, print single or double-sided, and specify mono or colour output.

Card release

For devices already installed with card readers, secure print release can be enabled with a contactless swipe of an ID card. Once an individual authenticates at the device, the card reader communicates with the cloud server, retrieves a list of print jobs and releases them.

Release print jobs on mobile devices

With the mobile print app, it's also possible to use QR codes for secure pull printing. Users simply open the app, tap on scan for printer function and scan the code on the device. It also includes the ability to select how many copies of the print job to release, and to set preferences in terms of colour/mono or single/duplex print-outs.

Make printing simple

HCP's location-aware platform automatically discovers and shows users all available printers at their location, allowing them to print immediately, wherever they are.
