

Print Driver

Move print to the cloud. It's just simpler.

Managing a multi-vendor print infrastructure can be a pain for IT.

EveryonePrint Hybrid Cloud Platform (HCP) offers a full featured single driver that includes full finishing options for all major manufacturers, making it possible for everyone to print to any device.

- ◆ Eliminate multiple print drivers
- ◆ Lessen the load on IT
- ◆ Provide end-users with hassle free printing

Move print to the cloud.

It's just simpler.

EveryonePrint Hybrid Cloud Platform (HCP) offers a full featured single driver that includes full finishing options for all major manufacturers, making it possible for everyone to print to any device.

The legacy model of one printer, one driver, is a headache for IT - from installing devices, helping end-users to connect to printers, or updating multiple print drivers across the organization.

- ◆ Eliminate multiple print drivers
- ◆ Lessen the load on IT
- ◆ Provide end-users with hassle free printing

HCP makes **managing the print infrastructure extremely easy**

Automate administrative tasks

HCP makes it easy to deploy and control the entire printing infrastructure from a single web-based interface. It enables immediate end-user fulfilment/device provisioning, removes complexity, reduces the pressure on IT, and lowers support costs.

Manage multiple devices with the full featured single driver

Seamlessly centralise multi-vendor printer configuration with a vendor-agnostic single print driver. Unlike manufacturers' universal print drivers, HCP is designed to work across all models and all brands. It removes the requirement to qualify and install multiple drivers, enabling IT to utilise a single driver for all printing devices on the network.

Save time and money

The powerful full featured single driver simplifies ongoing management. Troubleshooting print driver conflicts and managing updates, takes time and money. All updates are included right into the HCP driver, and it's easy to add or remove devices without installing another driver, driving significant economies of scale.

Reduce helpdesk pain points

Reduce pressure on the IT helpdesk by eliminating common end-user issues around connecting to a printer, installing print drivers or accessing printers from multiple locations. With HCP it's possible to deploy the single driver across multiple domains, meaning end-users can connect to any device, irrespective of their network or location.

Make print perform

Print securely to any device (all major print manufacturers) with full complex print driver commands (duplex, staple, punch etc.). HCP enables self-service for users to add or search for devices available to them. It's also possible to set location aware printers, meaning that users working across different branches, offices or departments can seamlessly and securely access a print device across any network or location.

Improve the end-user experience

HCP features a serverless PC and Mac client. Fully compatible with the full featured single driver, it includes the ability to store print jobs locally until released for print. Once a user authenticates at any device, HCP seamlessly formats the job including all finishing options, and quickly sends to the printer, regardless of brand.
